

Microsoft Fabric

make your organization
more data-driven

Today's speakers

Thomas Andersen
**Director &
Technology
Advisor**

Rosa Ryberg
**Director &
Strategic Advisor**

Agenda

- 1 **Inspari – a brief introduction**
- 2 **Data-driven – an inflight**
- 3 **What is Microsoft Fabric?**
- 4 **What makes Microsoft Fabric Special?**
- 5 **Take-aways**

*“We accelerate
the
transformation
of Digital
Commerce”*

*“We empower
decisions, actions
and change
through
people and data”*

Data-driven an inflight

Drivers to become data-driven

A new culture is in town

Meet *Data Culture*

Besides people, **data** is the most important asset in our organization

Data is everyone's responsibility!
Roles and tasks are clearly defined

Every one can read, work with, analyze and communicate **data**

Management is engaged and prioritizes **data** initiatives

quite often the reality is different

Often

- we don't have data
- we don't have all data
- we don't trust data
- we don't understand data
- we don't have a common language to discuss data
- we don't know how to act on data
- we don't always have fresh data
- ...

Then

- we create our own interpretation
- we can't wait for the "IT department" to build something
- we build something locally
- we default to the tools, we have at hand
- we forget to document it
- we have no automation
- ...

becoming data-driven **requires people and a culture of working with data**

tools won't
make you
data-driven

**but tools can enable
your organization
to be data-driven**

What is Microsoft Fabric

Data analytics for the era of AI

Microsoft Fabric is an **all-in-one analytics solution** for enterprises that covers everything from data movement to data science, Real-Time Analytics, and business intelligence. It offers a comprehensive suite of services, including **data lake, data engineering, and data integration, all in one place.**

With Fabric, you don't need to piece together different services from multiple vendors. Instead, you can enjoy a highly integrated, end-to-end, and easy-to-use product that is **designed to simplify your analytics needs.**

Key concepts

**Complete
Analytics
Platform**

**Lake Centric
and Open**

**Empower Every
Business User**

**AI
Powered**

Software as a Service

Easy and accessible

Frictionless onboarding

Instant provisioning

Quick results w/ intuitive UX

Success by default

Minimal knobs

Auto optimized

Auto integrated

Centralized administration

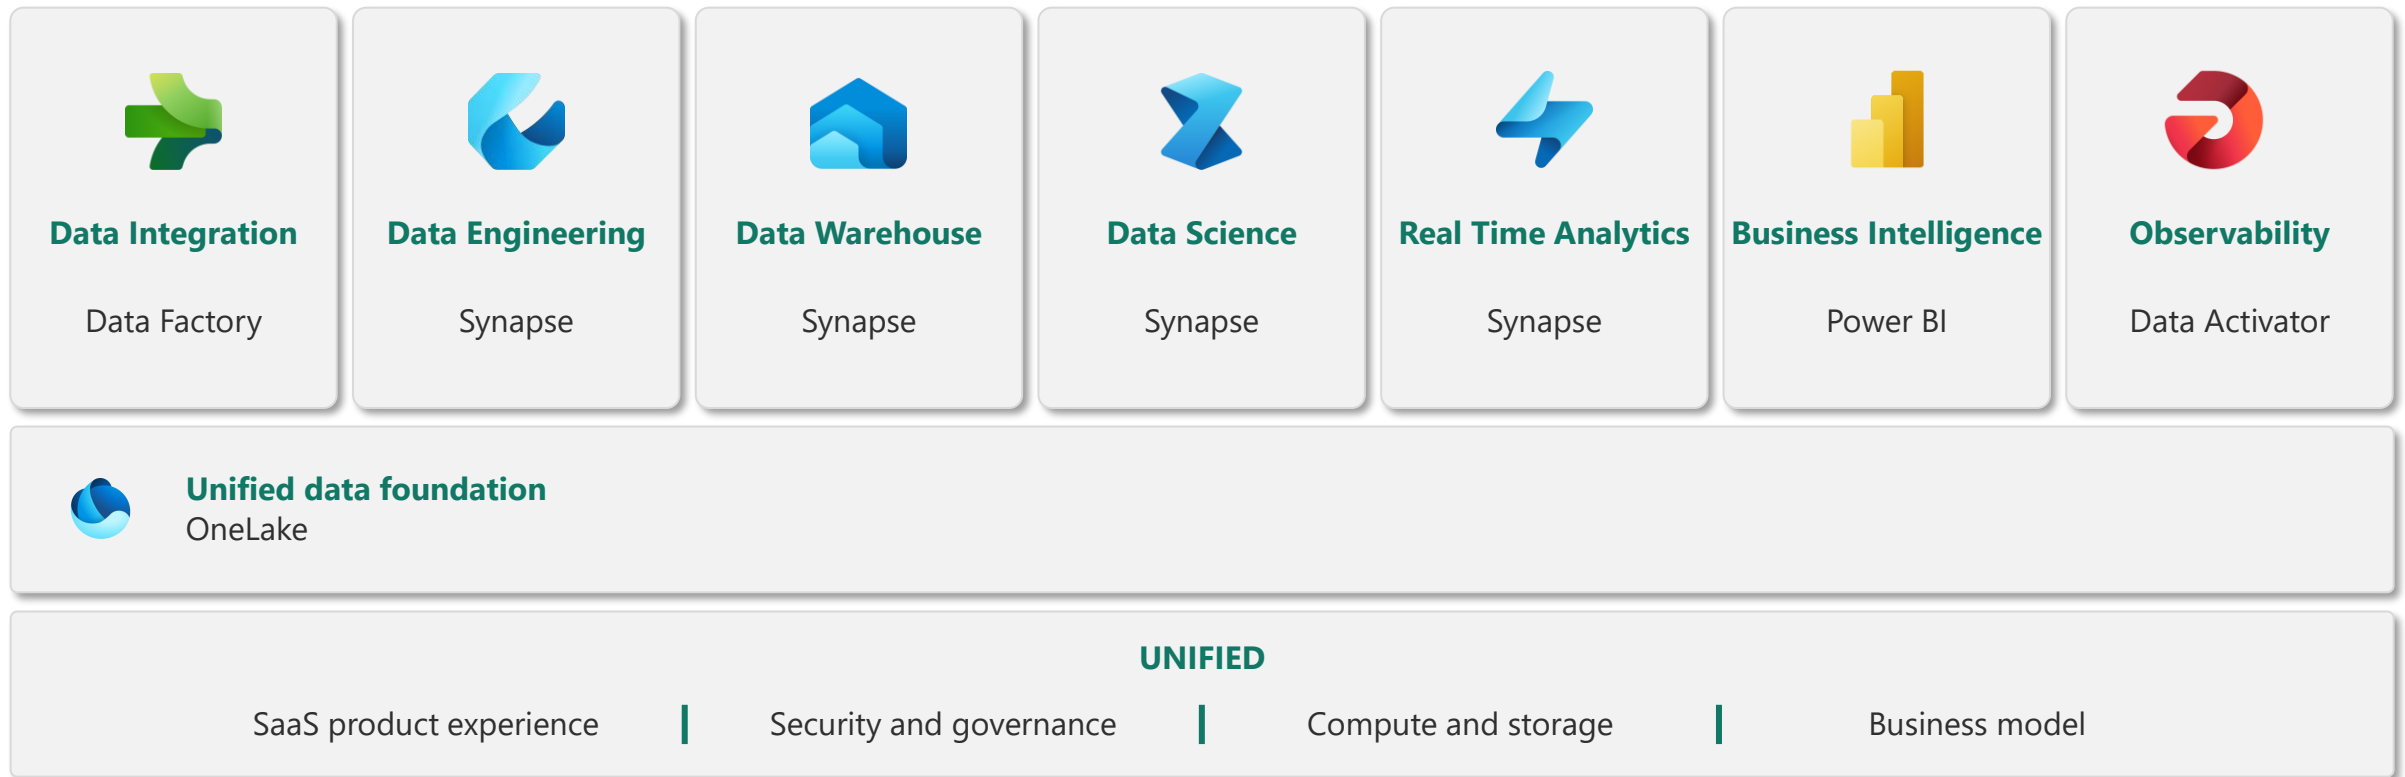

Tenant-wide governance

Centralized security

Compliance built-in

Microsoft Fabric at a glance

The new experiences

 Data Integration Data Factory	 Data Engineering Synapse	 Data Warehouse Synapse	 Data Science Synapse	 Real Time Analytics Synapse	 Business Intelligence Power BI	 Observability Data Activator
--	---	---	---	--	---	---

 **Unified data foundation**
OneLake

UNIFIED

SaaS product experience | Security and governance | Compute and storage | Business model

Power BI plays a central role

What makes Microsoft Fabric different?

how Microsoft envision
a platform for collaboration

and most importantly,
who can take part in this
collaboration

Data Engineers

- **Execute faster** with the ability to spin up a Spark VM cluster in seconds, or configure with familiar experiences like Git DevOps pipelines for data engineering artifacts
- **Streamline your work** with a single platform to build and operate real-time analytics pipelines, data lakes, lake houses, warehouses, marts, and cubes using your preferred IDE, plug-ins, and tools.
- **Reduce costly data replication** and movement with the ability to produce base datasets that can serve data analysts and data scientists without needing to build pipelines

Serve data via warehouse or lakehouse

Supporting experiences:

Data Scientists

- **Quickly tune a custom model** by integrating a model built and trained in Azure ML in a Spark notebook
- **Work faster** with the ability to use your preferred data science frameworks, languages, and tools
- **Bypass engineering dependencies** with the ability to use your preferred no-code ML Ops to deploy and operate models in production
- **Tap into proven-at-scale models and services** to accelerate your AI differentiation (AOAI, Cognitive Services, ONNX integration, etc).

Serve transformed data

Supporting experiences

Data Analysts

- **Avoid slow, progress-stagnating data wrangling** by seamlessly triggering a workflow that can unlock data engineering tools and capabilities quickly.
- **Accelerate your work** with visual and SQL based tools for self-serve data transformations and modeling as well as self-serve tools for reporting, dashboards, and data visualizations
- **Turn data into impact** with industry-leading BI tools and integration with the apps your people use everyday like Microsoft 365

Serve insights via embedding

Supporting experiences

Data Citizens

- **Make more data-driven decisions** with actionable insights and intelligence in your preferred applications
- **Maintain access to all the data you need**, without being overwhelmed by data ancillary to your role thanks to fine grain data access management controls

Supporting experiences

Data Stewards

- **Maintain visibility and control of costs** with a unified consumption and cost model that provides evergreen spend optics on your end-to-end data estate
- **Gain full visibility and governance** over your entire analytics estate from data sources and connections to your data lake, to users and their insights

Serve data via warehouse or lakehouse

INSPARI

Supporting experiences

Serve data via warehouse or lakehouse

Serve transformed data

Serve insights via embedding

Serve data via warehouse or lakehouse

OneLake

One data lake for the entire organization
One copy of data for use with multiple analytical engines

Data Stewards

- **Maintain visibility and control of costs** with a unified consumption and cost model that provides evergreen spend optics on your end-to-end data estate
- **Gain full visibility and governance** over your entire analytics estate from data sources and connections to your data lake, to users and their insights

Who can participate

Classic developers

- We have a platform with all the tools needed for the pro-developer
- Many tools will be recognizable as they are known service repackaged but with more features
- The platform stacks up against the competitors, but can do so much more

And many more

- Those who already are familiar with Power BI, will feel right at home
- For those who are comfortable in excel, the leap is not that great
- And for the DIY types who are accustomed to building things, this will be a huge playground

**Ideas can be tested and proven by
those who had the idea**

**That sounds promising,
anything we should be
aware of?**

**”a fool with a tool is
still a fool”**

Data literacy is about **empowering** your employees to **utilize data** to make **smarter decisions**.

Read data

Work with data

Analyze data

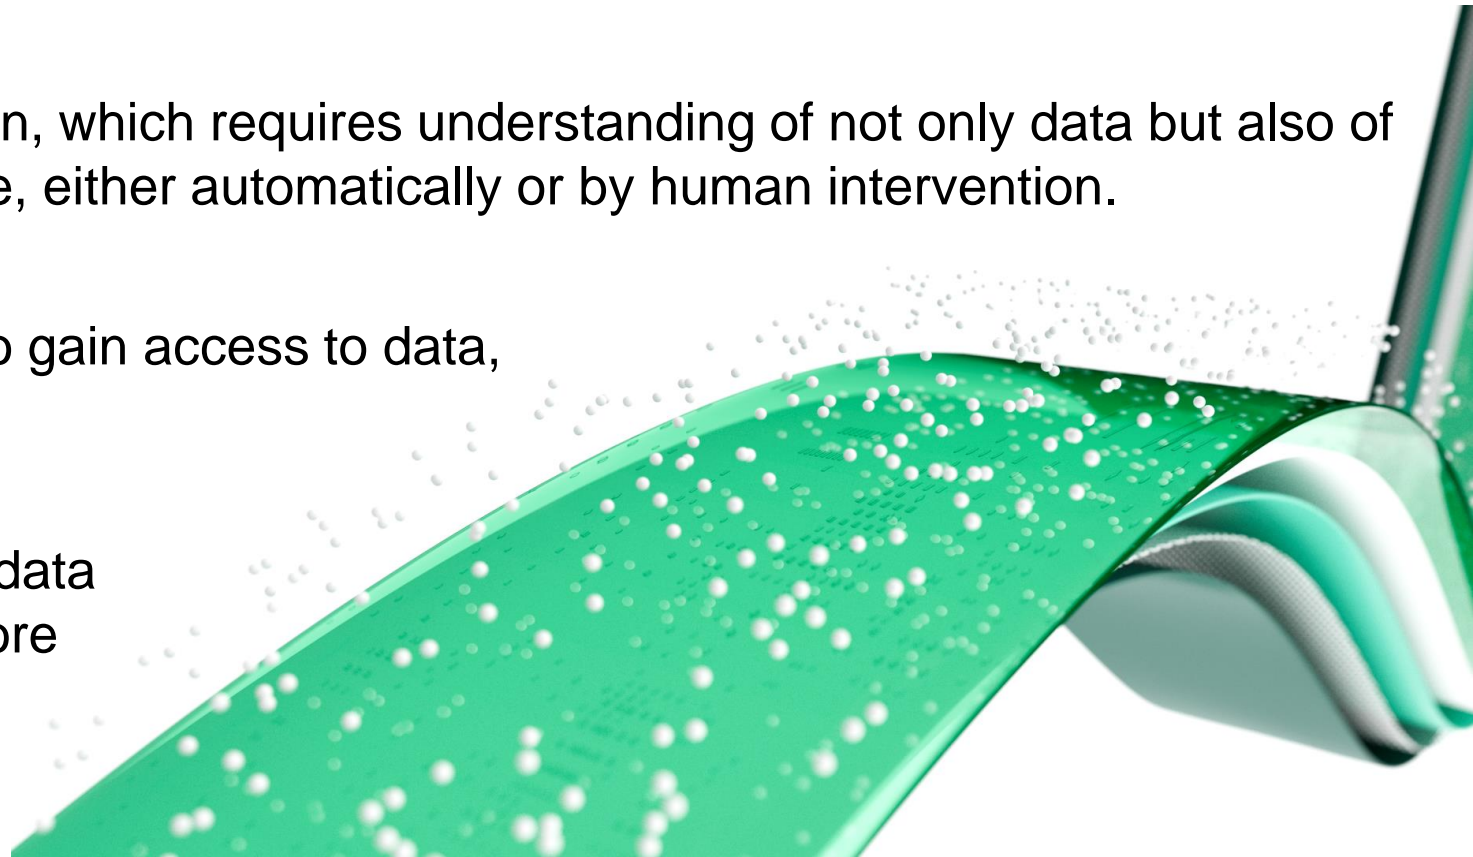

Communicate with data

Data-driven yet?

- Microsoft Fabric, or any other tool or platform, will not make you data-driven, but it can enable your organization to be data-driven
- People and processes can be data-driven, which requires understanding of not only data but also of the processes where decisions are made, either automatically or by human intervention.
- Tools and platforms can make it easier to gain access to data, process data and make data available
- Microsoft Fabric just made working with data more accessible than we have seen before

Your next questions

1. How does Fabric fit into our existing solution?
2. Can Fabric coexist with our current platform?
3. Can we transition to Fabric or is it a big bang implementation?
4. Can we please talk some more about how to empower our users?
5. ...

Your next action

Contact Inspari for a meeting to talk about concerns and ambitions, next step could be a workshop for further clarification or a pilot where we test it out

Leading people – leading business
